PROFESSIONAL SUMMARY

Final-year B.Tech Artificial Intelligence & Data Science student (graduating July 2026) with hands-on experience building end-to-end AI/ML systems — from fine-tuned NLP models and computer vision pipelines to production-grade Android apps with live GenAI inference. IEEE-published researcher (99.54% CNN classification accuracy). Seeking an MLOps / AI Product Developer role to design, deploy, and monitor scalable, real-world AI solutions using MLOps best practices.

TECHNICAL SKILLS

Languages: Python, Dart, Kotlin, C++

AI / ML Frameworks: PyTorch, TensorFlow/Keras, Hugging Face Transformers, Scikit-learn, YOLOv8, OpenCV

MLOps & Deployment: Docker, FastAPI, REST API, Git, CI/CD, AWS, model deployment pipelines

NLP & GenAI: BERT (fine-tuning), LLMs, Gemini API, Prompt Engineering, RAG, ABSA

Web & Mobile: Flutter, Streamlit, HTML/CSS/JavaScript, Node.js, Express, MongoDB

Tools & Platforms: VS Code, Android Studio, MySQL, Google Colab, Jupyter Notebook

Soft Skills: Research & documentation, end-to-end product thinking, cross-functional collaboration

INTERNSHIP EXPERIENCE

Data Science & GenAI Intern — Innomatics Research Labs (Remote)

Nov 2025 – Present

- ▶ Built a full-stack AI Advisor application using Streamlit and Gemini API, delivering real-time conversational AI insights through an interactive web interface, improving user query resolution speed by ~35%.
- ▶ Designed and deployed end-to-end GenAI pipelines integrating LLM-backed workflows with real-time user interaction, handling 500+ prompt interactions during testing cycles.
- ▶ Applied prompt engineering strategies and REST API optimization, reducing model response latency by approximately 20% through caching and batched calls.
- ▶ Collaborated on model evaluation and output quality benchmarking, contributing to internal documentation for production deployment standards.

PROJECTS

Focus Guardian — AI-Powered Android Productivity App —

Dec 2025 – Present

Flutter · Dart · Kotlin · Android AccessibilityService · Gemini 2.5 Flash · REST API · CI/CD

- ▶ Engineered context-aware content classification using Android AccessibilityService + Gemini 2.5 Flash zero-shot prompting to detect Productive vs. Distraction content in real time, including Hinglish — achieving ~94% correct classification in manual testing.
- ▶ Implemented a 3-strike intervention system with automated app-closing logic and 10-minute API throttle, reducing unnecessary API calls by ~40% while enforcing autonomous focus sessions.
- ▶ Resolved Google Play Store Accessibility Service compliance (Prominent Disclosure requirement), completing full deployment pipeline from development to production submission.

Cross-Platform Sentiment Analysis using Fine-tuned BERT —

Jan 2026 – Present

Python · BERT (bert-base-uncased) · PyTorch · Hugging Face Transformers · Streamlit · Flipkart + Amazon datasets · ABSA

- ▶ Fine-tuned bert-base-uncased on 8,500+ Flipkart & Amazon product reviews, achieving 91.3% F1-score across 3-class sentiment (Positive / Neutral / Negative).
- ▶ Implemented Aspect-Based Sentiment Analysis (ABSA) to surface attribute-level insights (price, quality, delivery) beyond overall polarity — reducing manual review effort by ~60%.
- ▶ Deployed an interactive Streamlit dashboard for real-time inference with per-aspect sentiment breakdowns, accessible via REST API integration.

Abhijeet Travels — Commercial Travel Agency Website —

2025

HTML · CSS · JavaScript · Responsive Design · Client Deployment

- ▶ Designed and delivered a fully functional, mobile-responsive commercial travel agency website for a real paying client — now live in production.

- ▶ Implemented dynamic tour packages, WhatsApp inquiry integration, and Google Maps embeds, reducing client inquiry handling time significantly.
- ▶ Actively used as a portfolio differentiator when pitching for junior developer and freelance roles at travel and hospitality companies.

Synthetic Data Driven Malaria Detection (CNN + GAN) —

2025

Python · PyTorch · CNN · GAN · Medical Imaging

- ▶ Generated synthetic malaria cell images using Generative Adversarial Networks (GANs) to augment limited medical datasets, improving CNN-based detection accuracy to 99.54%.
- ▶ Research accepted and presented at IEEE ICCTWC 2026 (Paper ID 928), demonstrating production-grade AI pipeline for clinical use cases.

EDUCATION

B.Tech in Artificial Intelligence & Data Science — Nagesh Karajgi Orchid College, Solapur Nov 2022 – Jul 2026

Dr. Babasaheb Ambedkar Technological University, Lonere

RESEARCH PUBLICATIONS

Synthetic Data Driven Malaria Detection Using Generative Adversarial Networks and CNN

IEEE ICCTWC 2026 — International Conference on Computing Theory and Wireless Communications | Paper ID: 928 | Accepted, 2026

CERTIFICATIONS & ACHIEVEMENTS

Certifications: Deep Learning Fundamentals – NVIDIA | AI Skill Challenge – Microsoft Learn | Introduction to AI – Great Learning

Hackathons: 2× Smart India Hackathon Participant | Bhartiya Antariksh Hackathon | Google Cloud Arcade GenAI Facilitator
